CETO™ SMART FEATURES

CETO™ UMR-904 is a **UNIVERSAL MOTION REMOTE** with a motion sensor, programmable for unparalleled energy savings up to 60% in the operation of any air-conditioning system that incorporates a built-in remote-control receiver. It is capable of operating over 6,000 different brands and models of air-conditioners.

CETO can detect **HUMAN MOTION** within a 25-foot distance and control the operation of an air-conditioner according to the presence of human motion and can be programmed to turn the air conditioner completely off or have the setting temperature increased to a desired setting for incredible energy savings.

CETO's default mode would be **ECO MODE**, which adjusts room temperature based on occupancy and temperature / time settings.

CETO™ introduces the **NIGHT MOTION** feature, which automatically disables the ECO Motion setting from 11:01 pm to 8:00 am, keeping the PIR function inactive. At 8:01 am, CETO'S PIR function reactivates. Users can modify this timing by holding the "TIMER" and "PIR" buttons for 3 seconds and adjusting with the UP and DOWN buttons.

CETO besides being a Universal Motion Remote, can also be used as a night lamp where the LCD screen will light up upon detecting motion in the given room. After a period of time, the LCD screen will turn back off automatically.

CETO can function as a thermometer, hygrometer and also as a time clock with a timer on / off function.

CETO can be used as a wall thermostat fixed on a wall or, with its adjustable bracket, can be set on a table or desk for outstanding convenience.

CETO can be set up and installed in under 5 minutes with no power or control wiring required.
